

UltiPro Business Intelligence New Features and Highlights Coming Soon

A new user interface and enhanced reporting capabilities are coming to Business Intelligence in May of 2018. This enriched solution, based on IBM[®] Cognos[®] Analytics, streamlines existing reporting processes by giving you easier access to available information, more guidance on the best tools and visual elements for presenting your data, and advanced drag-and-drop features for ease of use.

We know you want fresh ways to report on your metrics, and simpler options for finding key insights you can leverage for making smart, strategic business decisions. We've listened to you, and that's why your improved solution will include:

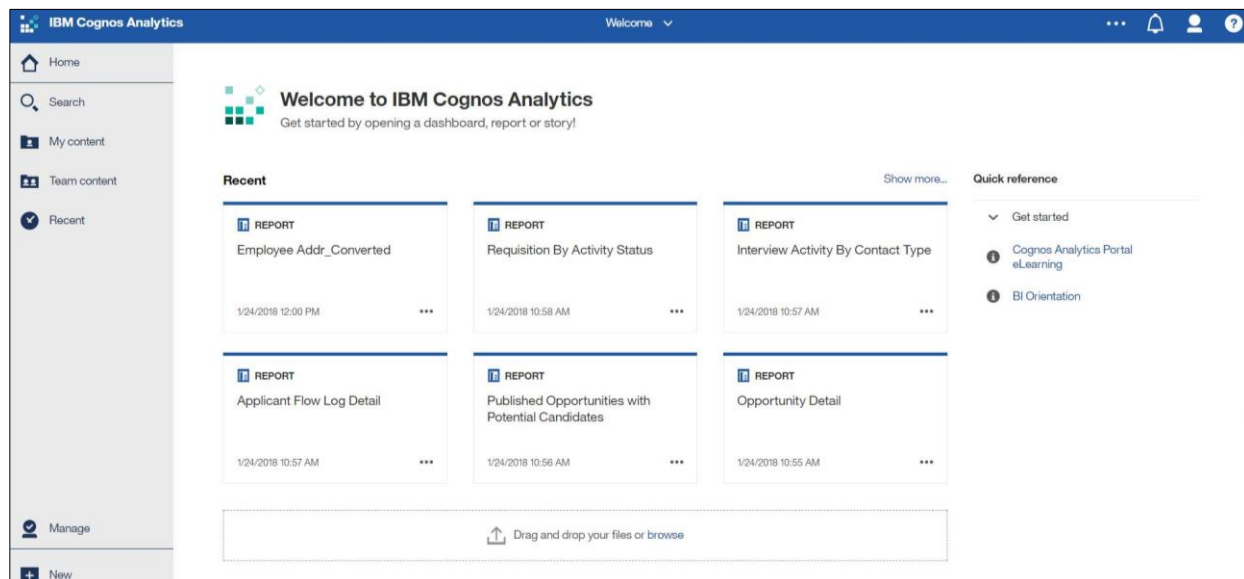

For more on what you can expect with these new capabilities, and how they will boost report appearance and overall insights, we're highlighting the new features, tools, and layouts you'll find in this enriched solution.

Revamped User Interface

Easily find the Business Intelligence data items, tools, and tasks you need.

Our revamped user interface gives you the benefits of modern design by providing:

- A cleaner layout and workspace for creating your reports
- On-demand menus that expand when selected to display relevant tools for your current task
- A customizable My Preferences menu that lets you control your portal display upon login
- A consistent user experience on all devices

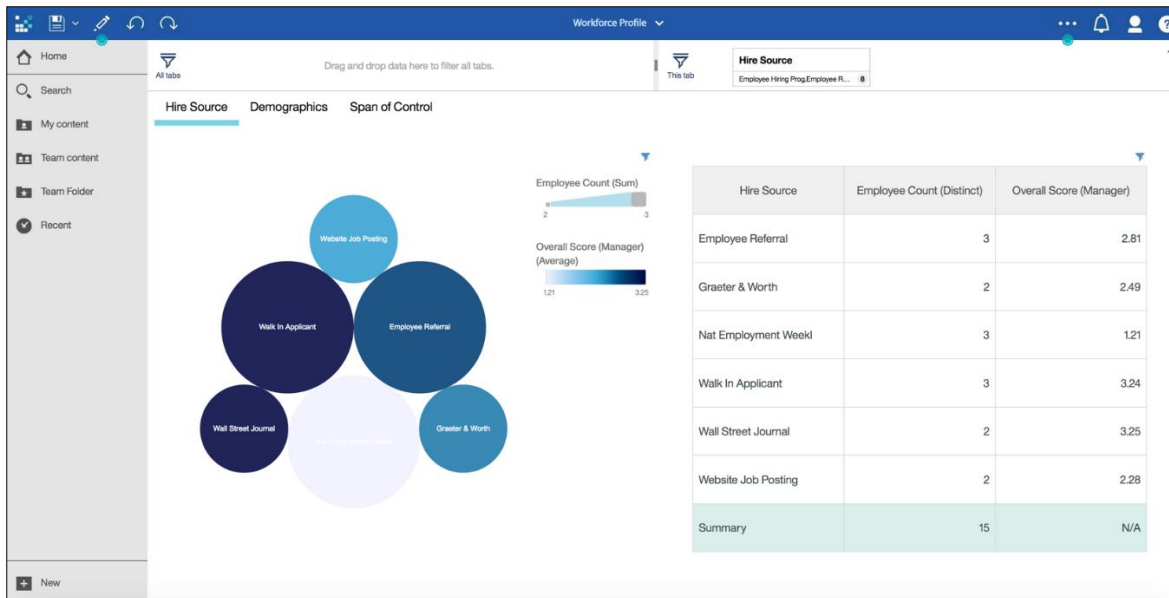

Gain access to recent items, eLearning, and orientation right from the home page.

More details on how to use the new portal and create reports will be coming soon!

Innovative Dashboarding

Gather and display your business data in an actionable and meaningful way.

Designed for report creators at all levels, Dashboarding offers a user-friendly experience that lets you select your points of interest, add them to the canvas, and choose a graphics element (based on automatic system recommendations) that best works with your data set. It's easy, quick, and provides you with the essential people and business insights you need to know on the fly.

Use visuals automatically generated for your specific data set.

To generate your results even faster, an embedded field search feature assists you in quickly locating the information you need from within report packages. No more digging for data components. Describe what you're looking for and watch your options populate.

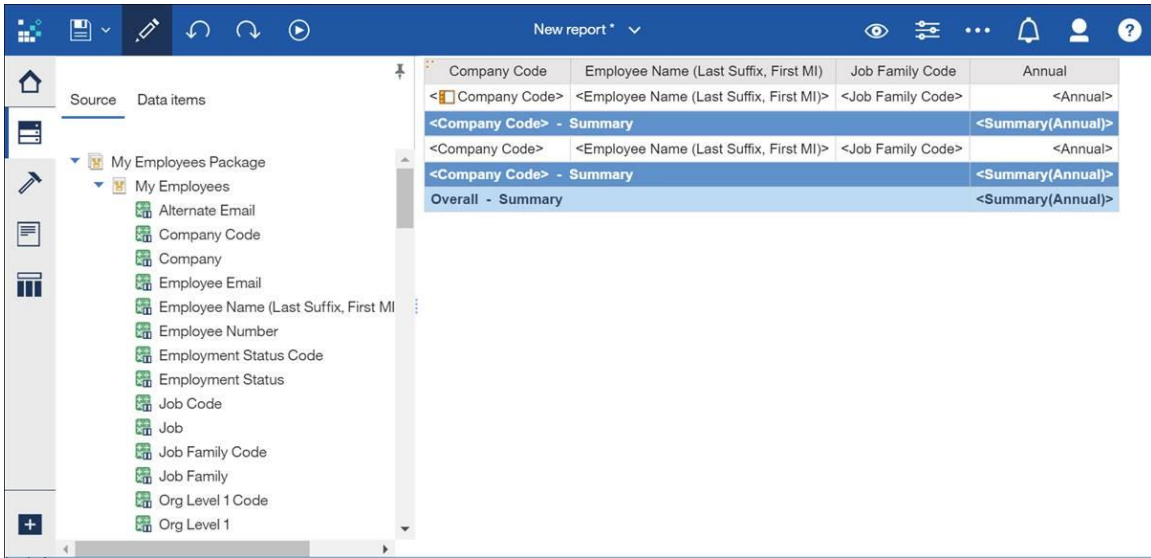

Single Reporting Tool

Simplify the way you create your reports.

The features you're accustomed to have been consolidated into a single studio, called Reporting. Authors and report administrators alike can use Reporting to present or modify their findings using data items and tools now found in a centralized location. Capabilities range from ad-hoc reports for business data analysis to in-depth professional reports.

To help you easily navigate this studio, Reporting now includes the following new layout components:

- **Application Bar:** Allows you to run reports, switch between report views, and save content.
- **Side Panel:** Gives you easy access to various data items and tools available in the Content Pane to create and modify your reports.
- **Work Area:** Lets you use easy drag-and-drop functionality to select your desired report layout and the data items to build your reports.

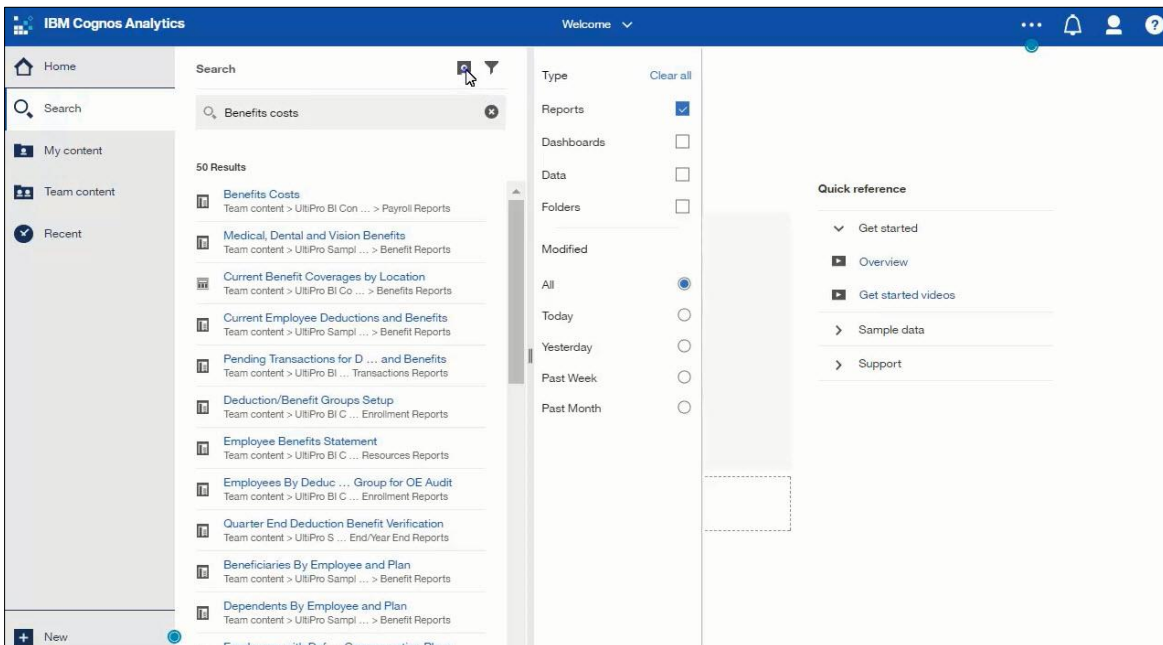

Complete all your reporting needs in one convenient location.

Improved Search Functionality

Save time building your reports with enhanced content search functionality.

Available from your portal home page, this robust search tool lets you:

- Search for specific content items—such as packages, reports, and alerts
- Filter results by content type or date
- Save results for later use, providing quick reference in the future to further streamline your reporting

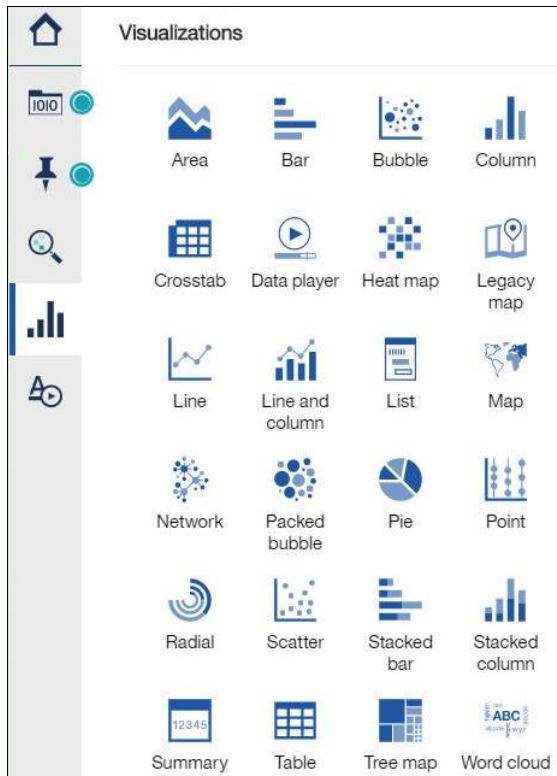

Easily find the information you need with new filtering and save features.

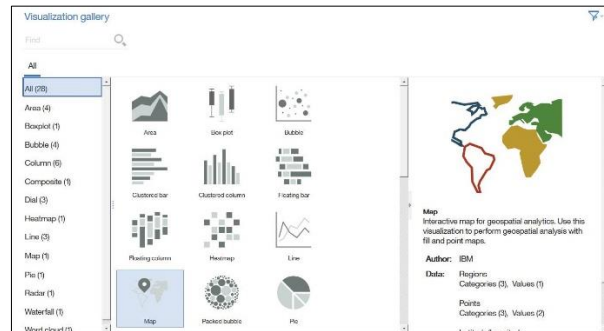

Advanced Visualizations

Create visually appealing reports.

Sharing large amounts of data can be difficult, so we're offering new visualizations to help you elevate the way you display information. Make your data come to life with the help of more than 25 advanced graphics offerings—such as the new geographical map and word cloud—that make it easier to consume the details and metrics you're presenting.

Dashboarding Visualization Gallery

Reporting Visualization Gallery

Double the fun: Two separate galleries—one in Reporting (under Visualization Gallery) and the other in Dashboarding (under Visualizations)—let you enhance the look of your results no matter where you're working.

Do the wave: A new data player animation in Dashboarding allows you to show the ebb and flow of your data over time. After selecting your report data and graphical visualization, simply drag and drop the player and watch your data move.
